

# XLayers

Supporting companies in the end-to-end reinsurance process

## WHAT IS IT?

**XLAYERS** enables the **management and certification of reinsurance processes**, from the allocation of technical items (premiums, claims) to reinsurance contracts, to the preparation of accounts to reinsurers / brokers and the feeding of the accounting system. It is equipped with a sophisticated statistical system to filter and extract granular information.

## WHAT DOES IT DO?

An ecosystem that allows the "**end to end**" **management of all active and passive reinsurance processes** and manages all aspects of assignments and retrocessions, from technical to administrative and reporting. Designed for insurance companies and groups, it is a multi-currency system and manages proportional and non-proportional reinsurance, mandatory and optional.

# HOW DOES IT WORK?

## EASE OF USE

Simple, intuitive, fully integrated and consolidated with the Client's systems, easily fed with data from portfolio management systems with the required level of detail.

## CUSTOMER ENGAGEMENT

It allows customers to set reinsurance rules for homogeneous risk groups and automatically aggregates treaty and optional technical account information, even if it comes from external sources (e.g. MS Excel).

## XLAYERS IMPLIES A PARADIGM SHIFT

From the constraint of the aggregate datum to granularity, which allows to attribute reinsurance to any technical element (product, class, warranty, risk, etc.).

## FUNCTIONAL COMPLEXITY

XLayers allows to automate more than 96% of reinsurance management and calculations.

# WHERE DO WE APPLY IT?

XLayers is adopted by **over 60 Insurance Companies** in EMEA.

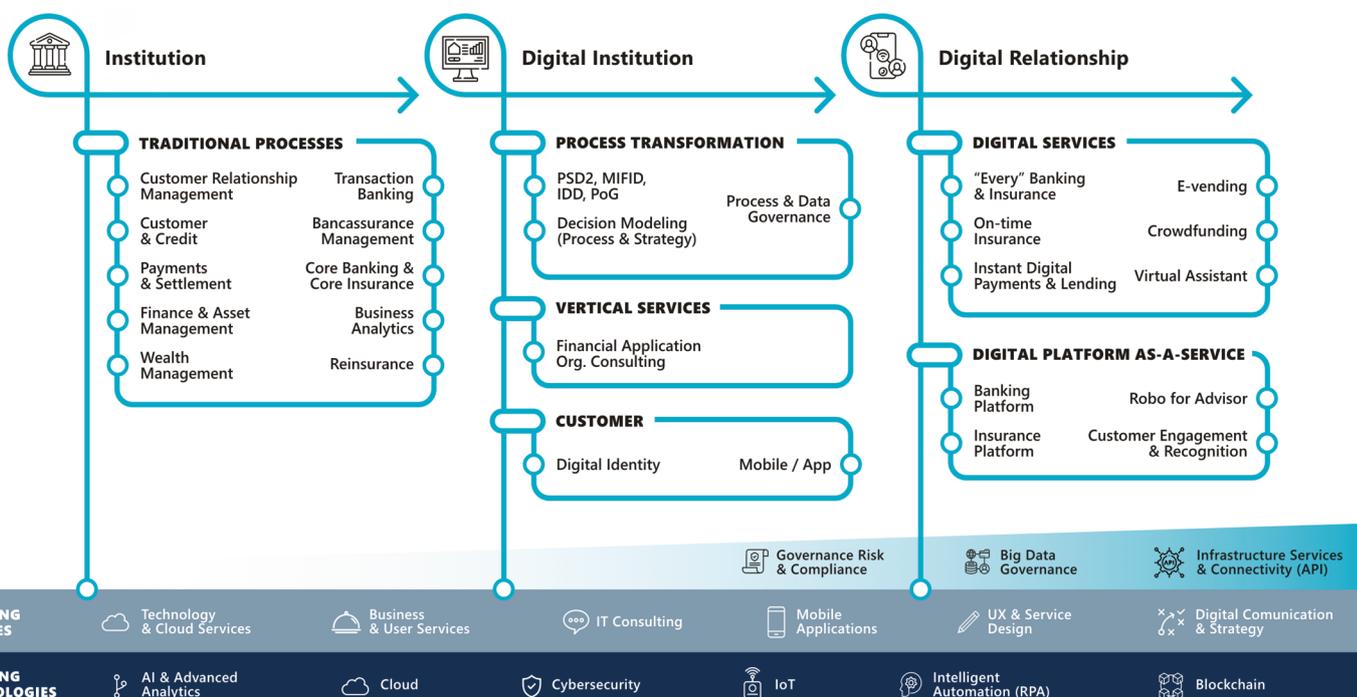

### Target audience

- Insurance companies
- Insurance groups

### Product managed

- Non-life ad life insurance products

# DIGITAL FINANCE: PORTFOLIO MAP

## WHAT VALUE FOR OUR CUSTOMERS?

- At least **50% reduction** in reinsurance management **costs**
- **96%** of management and reinsurance calculations **automatically concluded**
- **Centralizes and homogenizes** reinsurance rules in a single database and makes users independent
- **Eliminates operational risks** in the region
- Allows you to check and analyze in detail **the content of the balances**
- Provides **timely information** to management to enable the best decisions
- The whole XLayers process is self-consistent with respect to **data quality**

## TECHNOLOGICAL FEATURES

### HIGH INTEGRABILITY

Easily fed from any portfolio system, with the necessary frequency (even daily)

### OPTIMAL PERFORMANCE

Ensures high calculation performance and reduces reinsurance closure times from months/weeks to days/hours

### RISK & FINANCIAL MODELLING

Interfaced with Risk Explorer (URS), it can operate with any actuarial/statistical analysis (DFA) tool

### SECURITY DATABASE

Writes for Oracle Financials, SAP FI/CO - FS/CD - RE and any other accounting system according to Customer's rules, with the necessary periodicity

#### Distributed architecture

- Also available in CLOUD version on MS Azure platform

#### Technologies

- Made with Microsoft.net technology
- Supports Oracle and Microsoft SQL Server
- Tested in high-volume handling

#### Data migration

- Use of tools to allow the migration process in a structured manner and retrieve all the necessary data from the various systems of the Company
